**Abstract:**

The training course SUPPORT has been developed in the framework of the European Leonardo da Vinci programme and shows companies different ways to build up an environmentally sound innovation management system. This approach combines “cleaner production” tools with tools of the TRIZ methodology, which form the main part of the training course. The Training Course is also certified by The International TRIZ Association MATRIZ.

In spring 2006 the University of Leoben together with two partners (Joanneum Research and Stenum) offered the first public workshop series SUPPORT – based on the training material of SUPPORT in Austria.

The paper and presentation will give an overview about the experiences and the feedback of the participants as well as and outlook about further activities.

**Keywords:** Experience-Report, Technology-Transfer, Funded Projects, Dissemination Activities
